

Charging Disclaimer.

Charging time at public DC charging station with max. 130 kW performance. At a high-power charging station, e.g. from the IONITY network, you can charge your vehicle with maximum vehicle charging performance.

The charging performance depends on the state of charge, ambient temperature, individual driving profile and use of auxiliary consumers. The ranges shown are based on the WLTP best case. The charging times apply to ambient temperatures of 23 degrees Celsius after a preceding drive and may differ depending on the usage behaviour.
