Add some flair to everyday life

In order to prove itself over and over again on race tracks like the legendary Monte Carlo Rally, Škoda was usually in a bit of a hurry so to speak. For the Fabia Monte Carlo version, Škoda took more time.

The compact dimensions, roominess and economic, yet agile running make this car a perfect urban transport option, fulfilling your everyday needs with natural strength and ease. Together with the black exterior details, the Fabia Monte Carlo catches the eye on any track.

Not to be missed on any road

The Fabia model always radiates strength and confidence. The Fabia Monte Carlo design with specific black features results in an even more emotional expression and greater dynamics.

Stylish rear

The rear features glossy black elements such as inscriptions on the 5th door (Škoda, model name) and diffuser. The car's dynamic appearance is further accentuated by SunSet tinted windows, which also protect the interior from overheating in sunny weather.

Black front and side

The glossy black features such as the front grille frame, add-on part on the front bumper spoiler, door sill covers, and external side-view mirror caps are always accompanied by black brushed 17" Procyon alloy wheels with Aero covers.

Monte Carlo badge

The uniqueness of the car is emphasised by the Monte Carlo badge on the front wings, which recalls the success of Škoda vehicles at this legendary rally.

Enter an exclusive club

Stepping inside the Fabia Monte Carlo makes you feel exceptional. The interior, decorated with red metallic details and carbon décor, confidently parades its sporty style without losing any of its practicality. Plenty of attractive equipment for your comfort and safety, including sports steering wheel, instrument panel in Monte Carlo design (optional Virtual Cockpit shown), LED ambient lighting, and advanced assistance systems, also make this car fun to drive.

Panoramic roof

Expand your feeling of freedom and more space above your head with the optional panoramic roof made entirely of tinted glass.

Sports steering wheel

The sporty style of the interior is accentuated by the sports steering wheel in black perforated leather, which is decorated with the Monte Carlo plaque and chrome elements..

Comfort and style

The interior features front sports seats with integrated headrests, which provides maximum driving comfort. The specific fabric upholstery in black with red and grey stripes is complemented by the black ceiling. The car also comes with front door sill strips with Fabia inscription (not shown).

Pedal covers

The stylish interior is complemented by sports pedal covers in alloy design. The rubber facets on the pedals prevent your shoes from slipping.

Vents and USB in the rear

The vents located on the rear side of the front armrest allow rear passengers to easily adjust the airflow to suit them. Here you can also find two USB-C ports enabling mobile phone charging.

Rear armrest

When the middle rear seat is unoccupied, the arm-rest with drink holders can be folded down.

A red Skoda Monte-Carlo is shown from a front-three-quarter perspective, driving on a two-lane asphalt road that curves through a lush, green mountainous landscape. The car has a black roof rack and is casting a shadow on the road. The background features steep, forested hillsides under bright daylight. A dark green diagonal overlay on the right side of the image contains white text.

Travel assist

The Fabia Monte Carlo comes standard with Adaptive Cruise Control (including Front Assist) and Lane Assist. Optional Travel Assist can be added exclusively in combination with the Digital Dashboard, enabling Adaptive Lane Assist functionality.

For maximum safety, the Travel Assist system must be constantly monitored by the driver. That's why a capacitive steering wheel detects the driver's tactility, providing an interactive interface to the system. If the driver is not engaged in driving, this behaviour is detected by the capacitive steering wheel

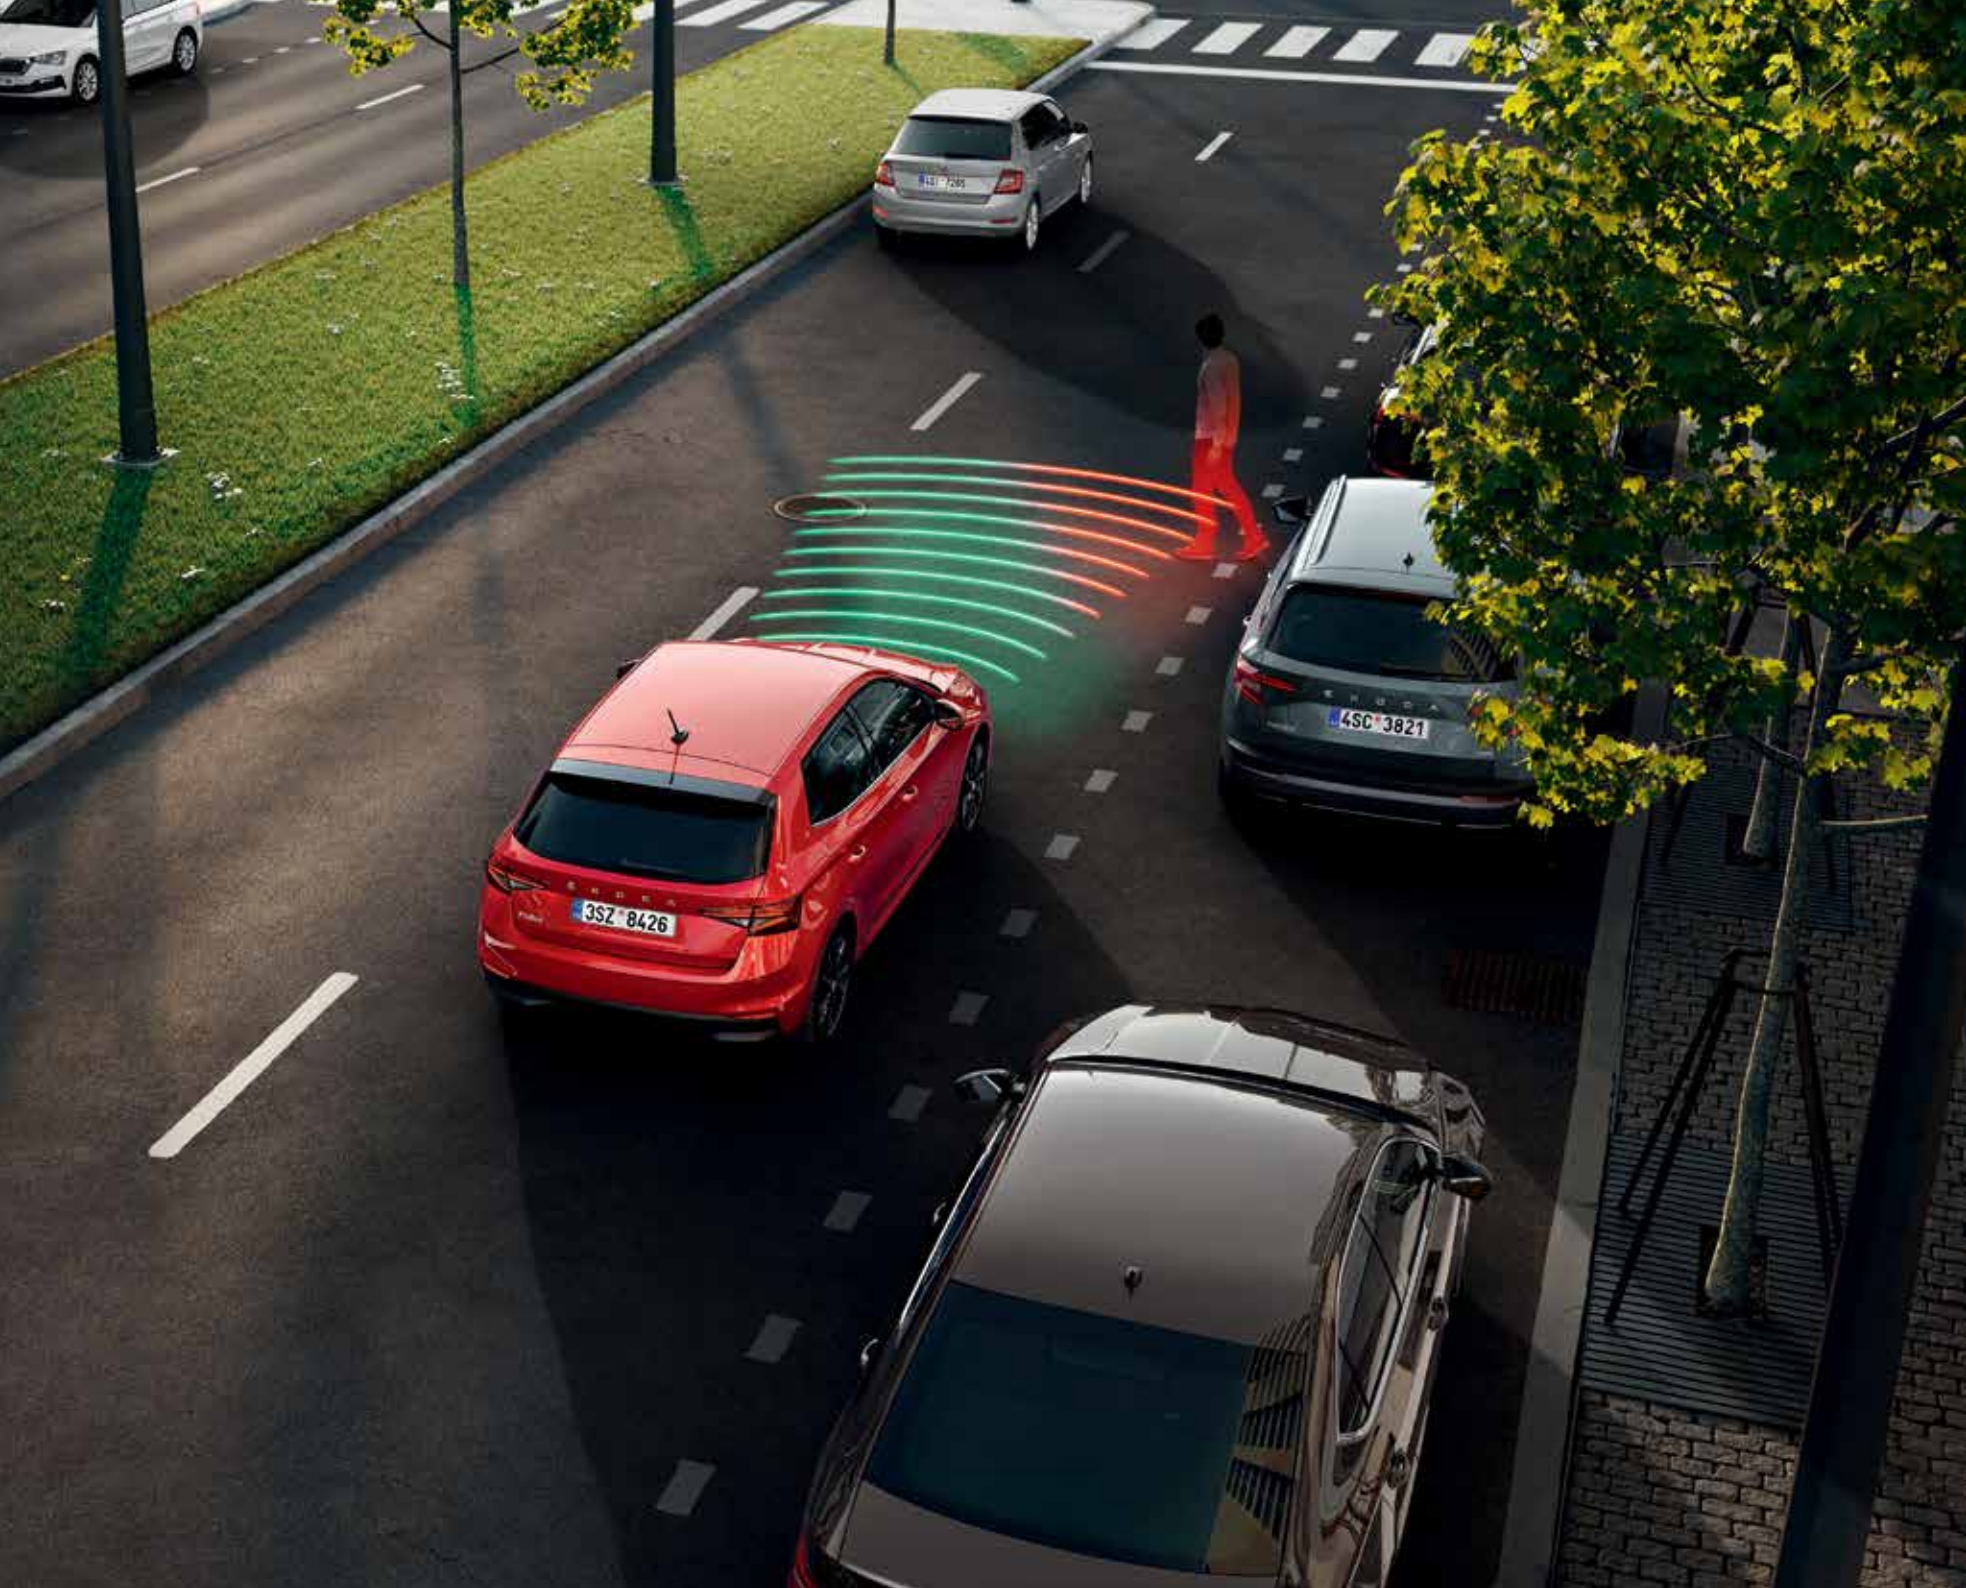

Adaptive Cruise Control

Using a radar device in the front grille, in addition to its basic cruise control function, this assistance system, which operates up to speeds of 210 km/h, maintains a safe distance from vehicles in front of you.

Adaptive Lane Assist (optional)

The system is capable of keeping the car in the middle of the correct lane and of alerting the driver in case of deviation. It can also take control of the car in the event of lane changes during roadworks.

Additional experts on board

You can encounter various things on the road. To ensure that the car is ready to handle all situations that may occur en route, additional assistants with multiple functions are on hand to help or fill in for the driver.

Front Assist

The Front Assist system, using a radar device in the front grille, is designed to monitor the distance from the vehicle ahead, including emergency braking function. The system also includes predictive pedestrian protection, which warns the driver via an audio/visual signal as well as a gentle jolt of the brakes.

Side Assist (optional)

Using radar sensors in the rear bumper, Side Assist (which can detect other vehicles and harder to see objects like cyclists up to 70m away) monitors the areas behind and beside your car. Based on the distance and speed of the surrounding vehicles, it decides whether or not it should warn the driver.

Rear Traffic Alert (optional)

Using the Side Assist sensors in the rear bumper, Rear Traffic Alert helps you reverse safely from a parking space during poor visibility. It can even engage the brakes automatically if it detects imminent danger.

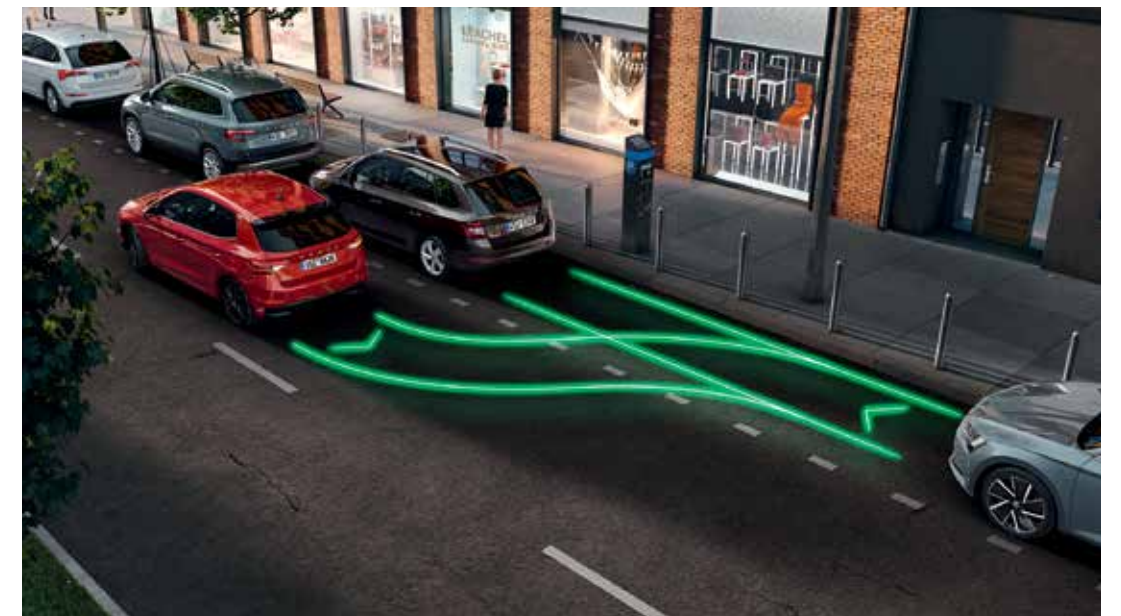

Park Distance Control

Parking the car is easier and safer with the parking sensors integrated in the front and rear bumper, which check the car's distance from any obstacles.

Park Assist (optional)

Minimise the hassle of parking in tight spots with Park Assist. It automatically selects an appropriate parking place and safely parks in a row of parallel or perpendicularly parked vehicles.
