

SKODA

Superb

Luxury means having what matters

Luxury isn't about glitter or gold. It's about seeking and nourishing what's truly important. The Škoda Superb is a car that embraces true luxury with none of the clichés. With a sophisticated design, comfortable technologies and endless practicality, it's a car that impresses with everything that matters.

The Superb can satisfy even the most diverse demands on appearance and equipment, and is available in unique versions such as the stylish Sportline, and the rugged Scout.

Exterior Design

Make a bold understatement

Elegance meets harmony in the Superb. The front, with its distinctive bumper, grille, and headlights, presents a dynamic, yet determined look. The fog lights are also unmistakable. In addition to their utility functions, they play a key design role.

Style and functionality

Perfectly balanced proportions give the car a graceful appeal. The SunSet tinted windows in the rear improve the exterior look as well as passenger comfort.

Lights don't show, they reveal

Advanced technology is made beautiful in the light design of the Superb. The Sportline comes with full LED Matrix headlights, which offer improved road lighting and a higher degree of safety.

Full LED Matrix headlights

Using a windscreen camera, the full LED Matrix headlights available in the Sportline can detect a car in front of you or in oncoming traffic. Based on this, the high beam adjusts itself incrementally. This ensures you get the best view without blinding other drivers.

Full LED tail lights

Fitted with animated turn indicators, full LED tail lights significantly improves the visibility of your car for other drivers. The lights are complemented by a chrome strip that comes exclusively in combination with full LED tail lights.

Interior Design

Quality as a standard feature

Every interior feature has been designed to make travelling comfortable. Enjoy the feeling of luxury with attractive décor, upholstery, door armrest stitching, chrome details and the LED ambient lighting running along the inside of the interior.

Decorative features

The interior features high-quality materials and precise workmanship, which is highlighted with the armrest and upholstery stitching. Plenty of chrome details can be found on the dashboard, doors, steering wheel and gearstick knob.

LED ambient lighting

You can choose your favourite colour, or complement each day with one of ten amazing colour options (turquoise shown). This is also reflected by the Virtual Cockpit background illumination.

Connectivity

Škoda infotainment: Take the world with you

The Superb's advanced connectivity will make everyday use of the car easier and provide you with all the support you need to make it to your destination in time and in comfort.

Wireless charging

The wireless compartment in the centre console of the Superb enables wireless charging and wireless connection to SmartLink+.

SmartLink+

SmartLink+ provides you with a connection between your smartphone and in-built infotainment via Apple CarPlay, Android Auto and MirrorLink™. Use the navigation system, play music and podcast via your favourite apps or deal with your text messages and calls.

Laura digital voice assistant

This voice control system understands fluent sentences. Say the destination with natural voice input, dictate text messages, or even ask her to tell you a joke. Laura is ready for anything. To start fulfilling your wishes, simply contact her by saying "Okay Laura!"

Smart
features

Umbrella box

An ingenious umbrella storage compartment is fitted inside the driver's door. It is designed to let water drain away from the car, keeping the interior dry. The original Škoda umbrella comes as part of the equipment.

A pocket for everything that matters

The Superb features a multitude of compartments, pockets and holders, keeping your elegant interior tidy, and your belongings safe from loss, breakage or spillage.

Jumbo box

The spacious Jumbo box storage compartment is housed in the front armrest. You can store your electronic items safely inside or cool it to keep your snacks fresh. A dual drinks holder with easy-open function can also be found on the centre console.

Pockets on the backrest

Storage pockets on the insides of the front seat backrests can hold a mobile phone, for example, or other small items.

Carry all that matters

The luggage compartment capacity traditionally puts the flagship Škoda at the top of its class for space. The wagon version offers either 660 litres or 1,950 litres after folding down the rear seats, while the liftback version offers 625/1,760 litres. But maximising space is nothing without maximising practicality. That's why we added smart solutions that make handling luggage even easier.

Net programme

The set of nets increases the flexibility of the luggage space while tightly securing objects. It includes one horizontal and two vertical nets. You can add a further net under the luggage compartment cover in the liftback version.

Flexible organiser

The aluminium flexible organiser (exclusively for the wagon version with a double floor) enables you to split the space according to your needs and makes it easier to keep things neat and tidy.

Comfort at your command

Technology is nothing if it doesn't simplify your driving experience. Loaded with thoughtful features and sophisticated assistant systems, the Superb will indulge you in absolute comfort and support your driving confidence, whether keeping you relaxed on longer journeys or being entertained on the go.

Electrically-controlled 5th door and virtual pedal

The electrically-controlled 5th door opens and closes at the mere touch of the button on the remote control or directly on the 5th door. You can also adjust the upper door position to suit your needs. The door is equipped with a virtual pedal enabling contact-free access.

KESY

With the new version of the KESY (Keyless Entry, Start and exit System) all doors can be used to unlock or lock the car.

Enlarged phone box

The new Superb comes with an enlarged phone box compartment that wirelessly charges your phone while driving. This compartment is not only easily accessible, but is also suitable for large display devices.

Area view (Sportline)

You will feel much more confident behind the steering wheel with four cameras that sense the space around the entire vehicle. They are located in the front grill, external side-view mirrors and on the handle of the 5th door. The picture is transmitted in real time to the infotainment display so you can react quicker to whatever comes your way. The functionality of the camera located on the handle of the 5th door is improved by integrated washers controlled via infotainment system.

Virtual cockpit

A perfect overview is provided by the Virtual cockpit, which can display on-board computer specifications in combination with other information such as navigation, for example. You can choose from five layouts, controlled via the View button on the multifunctional steering wheel – Classic view (shown), Modern view, Extended view, Basic view (suitable when driving at night or on the motorway) and Sport view.

Air Care and Air Quality Sensor

The Climatronic air conditioning features a smart Air Care function and Air Quality Sensor that contribute to cleaner air in the vehicle. Air Care can clean dust from the interior and must be activated by the driver via the Climatronic menu. The Air Quality Sensor, which detects excessive air

pollution, responds automatically by switching to internal air circulation mode, taking into account the possibility of the window fogging up. This function needs to be activated only once in the infotainment system.

Canton Sound System

Enjoy absolute sound clarity, whether it's music or the spoken word, on the Canton Sound System available in the Sportline, with twelve speakers, including a speaker in the dashboard and subwoofer in the luggage compartment. The total power output is 665 Watts.

Safety

Travel Assist

The Travel Assist system as well as its higher version combine the functions of several assistants and ensure that you feel safe and comfortable, no matter where you drive. For maximum safety, the system must be constantly monitored by the driver. That's why a capacitive steering wheel detects the driver's tactility, providing an interactive interface to the system. If the driver is not engaged in driving, this behaviour is detected by the capacitive steering wheel.

Traffic Jam Assist / Follow Drive

This function is designed to facilitate driving in traffic jams. By controlling the engine brakes, and steering, it makes the vehicle pull away, brake, and turn to copy the movement of the surrounding vehicles (at speeds of up to 60 km/h). If lanes are not detected at speeds of up to 30 km/h, or only one lane (line) is detected at speeds of up to 60 km/h, the Follow Drive system follows the trajectory of the vehicle in front of you until lane markings are available again.

Adaptive Cruise Control

The adaptive cruise control (ACC) maintains a safe distance from the vehicle ahead at a selected speed, controlling the engine and actuating the brakes to automatically accelerate or decelerate as needed. The system combines the cruise control system with a radar-based distance controller.

Lane Assist

The system can tell when you stray from a lane unintentionally. The system is active at speeds above 65 km/h, on condition that there are recognisable lane markings on the road and the indicator has not been turned on prior to crossing a marking.

Emergency Assist

Emergency Assist reduces the risk of an incident in the event of the driver's sudden health collapse, for example, by safely stopping the car and turning on the warning lights.

Park Assist with Manoeuvre Assist

The system warns of potential risk of collision with obstacles during parking by drawing data from sensors, the driving parameters and the steering wheel angle. To avoid those parking situations where you don't brake in time in response to the distance alerts, the Superb incorporates manoeuvre assist, a feature that stops the car to avoid collision. Optional for Scout and Style.

Crew Protect Assist

This assistance system provides increased protection for front-seat passengers in critical situations that could lead to a crash or overturning by closing the side windows to leave only a 5 cm gap, shutting the roof window, and tightening seatbelts.

Driver Alert

Driver alert reduces the risk of a fatigue-induced emergency situation. By monitoring driver behaviour, the system assesses the degree of driver fatigue and, if necessary, warns of the need for a rest and break in the journey.

Additional experts on board

You can encounter various things on the road. To ensure that the car is ready to handle all situations that may occur en route, additional assistants with multiple functions are on hand to help or fill in for the driver.

Matrix Beam function

The Sportline offers full LED Matrix headlights that feature Matrix Beam function. This allows you to use the high beams continuously, without blinding other drivers. Using a windscreen camera, the Matrix Beam function responds to the traffic situation and turns off only some segments

of the light. Other segments are turned on and illuminate the road. The Matrix Beam function also uses information from the navigation system. Thanks to it, the high beams will only turn on when you are out of a built-up area.

iV

Plug into the future

The Škoda Superb iV unites an innovative hybrid technology with the iconic design and spaciousness of a Superb. The car is available in Style, and a unique Sportline version.

Plug-in hybrid technology

The 1.4 TSI engine offers 115 kW, the electric motor generates 85 kW and the full system power is 160 kW. The battery with a capacity of 13 kWh is located under the floor in front of the rear axle and powers you up to an approximate 54 km drive, making this model the ideal

choice for driving in the city: cheap, green and quiet. During a purely electrical drive, the eSound acoustic system is activated, alerting pedestrians that a car is coming. The system operates both when driving forward (at speeds of up to 25 km/h) and when reversing (up to 10 km/h).

Charging

The plug situated behind the grille enables the practical charging of the electrical engine. When charging at home and connected to a conventional electrical grid, the battery (if completely empty) will be fully recharged within five hours. The charging time can be shortened to three hours and thirty minutes with a wall box or at a charging station that supports fast charging.

Modes / Dynamic Chassis Control

The default Hybrid mode switches automatically between petrol and electric drive, and comes with integrated functions such as Battery Hold (maintain battery charge level) and Battery Charge (charge battery via TSI engine) that can be controlled via the infotainment system. Using buttons on the central console, you can choose E-mode, which delivers a pure electrical drive, and Sport mode enabling a drive with a full system power of 160 kW.

Enjoy the high performance of your car in maximum comfort and safety, with the Dynamic Chassis Control (DCC) that comes standard in Sportline. As part of the infotainment menu, it allows you to select one of the three modes according to your specific requirements: Comfort, Normal or Sport.

Sportline

Time to get some sporty clothing

Comfort usually isn't a metaphor for sportiness. But these two make a thrilling combination inside the Škoda Superb Sportline thanks to its razor-sharp looks, together with glossy black exterior elements, and a host of specific accoutrements, including lower chassis and sporty interior.

Style and functionality

Front and rear sports seats, upholstered in a combination of black Suedia and leather/leatherette with silver stitching, provide maximum comfort even during a dynamic drive. For that maximum sporty feeling, front seats which feature cushion depth adjustment

are available as an option. The electrically-adjustable front seats with built-in memory come as standard. The distinctive and extremely durable Suedia upholstery is also incorporated in the door inserts.

Sportline design

The multifunctional sports steering wheel in black perforated leather with silver stitching allows you to control the radio, phone and alternatively DSG. The Virtual Cockpit, which features specific graphics for the Sportline version, comes as standard.

Scout

High-end even after highways end

While the Škoda Superb Scout, armed with protective exterior elements, higher chassis and rough road package, handles bumpy roads, you'll stay in absolute comfort inside the incredibly spacy interior, surrounded by high-quality materials and details. All made with Škoda's craftsmanship precision. The car comes exclusively in the wagon version.

Overseas interior shown.

Comfort and functionality

The high-quality fabric upholstery is not only exceptionally durable, but also provides maximum comfort for all passengers. The Scout version can also be equipped with black Suedia/leather/leatherette upholstery (shown), which

can be further complemented by optional Suedia door inserts. The electrically-adjustable driver seat with built-in memory comes as standard.

Style and safety

The multifunctional leather steering wheel, which lets you control the radio, phone and alternatively DSG, is equipped with heating function, controlled via the infotainment system. The car also comes with Driving Mode Select, including the off-road mode, or in other words, Downhill Assist which maintains consistent speed when driving down precipitous sections.

Logo

The Scout logo is embroidered on the front seat backrest.

Customisation
