T-Roc R model shown

T-Roc R 'It's an R Thing'

There's a feeling that's difficult to describe. But it comes over you in a wave when it happens. It's a feeling of undiluted exhilaration, joy and oneness with the road and your surroundings. It's a feeling we at Volkswagen like to call 'an R thing'.

Step into the T-Roc R, start the engine, and you can experience the excitement that comes with driving an R vehicle first-hand. The T-Roc R isn't just a worthy member of that select group of performance vehicles, it's notable for being a brand new addition to the T-Roc family.

The T-Roc R is a high-performance vehicle in every sense. The most potent T-Roc ever, the R extracts outstanding power and torque from its 2.0-litre turbocharged TSI engine. Coupled with a 7-speed DSG transmission, 4MOTION all-wheel-drive technology and Adaptive Chassis Control, the T-Roc R's forward thrust is manifested with exquisite precision and control.

Sharpened styling tells the story of the T-Roc R's breathtaking performance, with IQ.LIGHT matrix LED headlights just one of the vehicle's distinctive exterior features. The T-Roc R is just as impressive inside, with its boosted levels of innovative technology, digitalisation and connectivity. As modern and feature-packed as the cabin is, it still finds a way to be supremely comfortable, with Nappa leather appointed front seats[^], an appealing dashboard with decorative stitching and multi-function sports steering wheel all among the T-Roc R's impressive inclusions.

For the first time, Volkswagen's range of small SUVs has a stand-out range-topper. You haven't driven until you drive the stunning new T-Roc R.

[^]Leather appointed seats has a combination of genuine and artificial leather, but are not wholly leather.

Exterior

There's nothing like the styling of an 'R' vehicle to excite the senses. The T-Roc R does exactly that with its premium design and generous list of racing-inspired features.

The T-Roc R makes an immediate impact with its prominent radiator grille with R logo that showcases an illuminated LED grille strip and silver band made of anodised aluminium. IQ.LIGHT matrix LED headlights with Dynamic Light Assist sit astride the grille and cast a powerful beam over the road ahead.

The T-Roc R's lowered sport suspension contributes to its hunkered stance, while 19-inch Estoril alloy wheels bear a minimalist design perfect for revealing the R's distinctive blue brake callipers.

The flowing body lines of the T-Roc R integrate harmoniously with a roof spoiler and rear bumper in body colour, with optical air inlets and a black diffuser providing striking accents. An electric tailgate with 'Easy Open & Close' function makes it easy to access the T-Roc R's generous boot space. The tailgate and rear panel house premium LED tail lights with dynamic indicators, with an animated strip of light showing the turning direction. The T-Roc R's powerful rear design is given an added hint of menace with exposed dual chrome exhaust tailpipes that are immediately eye catching.

With its potent styling and irrepressible confidence, the T-Roc R is a deserving addition to Volkswagen's high-performance R range.

T-Roc R model shown

T-Roc R model shown

Interior

A vehicle as sporty as the T-Roc R demands an interior that's dynamic and performance driven.

The T-Roc R's cabin is all that and more. Find a snug and supported driving position with the T-Roc R's sport front seats, which are clad in luxurious Nappa leather appointed upholstery[^] and heated for driver and front passenger comfort. The driver's seat is electrically adjustable and with memory so you can revert to your optimal seat settings with ease. Black headlining creates a dark and sophisticated cabin feel that you'll love from first glance.

Grip the multi-function sports steering wheel in leather with touch controls and use the large gearshift paddles for rapid up and down gearshifts. A R button on the steering wheel is exclusive to R models and allows rapid activation of Race Mode, which primes the vehicle for exhilarating performance driving.

When you really want to set your T-Roc R apart, you can choose optional 'Lapiz Blue' matte inlays for the dashboard and doors, available when Lapiz Blue Premium Metallic paint finish is selected (not available with the optional Black Style Package).

Ambient interior lighting welcomes you whenever you're ready to drive. So does a R logo projection, which illuminates the entrance to the T-Roc R when the doors are opened.

T-Roc R with optional Premium audio and Lapiz Blue matte decorative inlays shown

Performance

Exhilarating performance is a hallmark of any vehicle that wears the 'R' badge and the T-Roc R is no exception. It joins exalted vehicles such as the Golf R and the Tiguan R as the pinnacle within its model line-up.

The T-Roc R's 2.0-litre 4-cylinder turbocharged TSI petrol engine is capable of an impressive 221kW of power and 400Nm of torque. With this much performance on tap, you'll never be left wanting when accelerating from a standing start or when overtaking.

Ensuring that the T-Roc R's prodigious power is transferred effectively is an efficient 7-speed Direct Shift Gearbox (DSG) offering fast and seamless gearshifts. It combines all the convenience of an automatic with the precision of a manual, and can intuitively predict your next gear change every time. Ensuring no loss of traction where rubber meets the road is Volkswagen's 4MOTION all-wheel drive system. It maintains optimal grip by continually adjusting power distribution to the front and rear axles of the T-Roc R as needed. This remarkably effective technology can provide extra security and peace of mind when driving on challenging surfaces.

Dynamic cornering and everyday comfort is enhanced with Adaptive Chassis Control. Pressing the 'R' button on the T-Roc R's steering wheel turns up the excitement by activating Race Mode, while other modes can be selected that prioritise everyday comfort.

There's no denying the T-Roc R for outstanding handling, precision and performance.

Technology

Cutting-edge technology goes hand-in-hand with the brand new T-Roc R. Whether it's to keep you safe or keep you entertained, the technology in the T-Roc R has you covered.

Safety systems in the T-Roc R, like in any other Volkswagen, are second to none. IQ.DRIVE® is the name Volkswagen gives to the comprehensive array of driver assistance and safety features it includes in its vehicles, providing comprehensive peace of mind to driver and passengers alike.

Central to the IQ.DRIVE® system is Travel Assist®, which allows for partially automated driving at a range of speeds. Travel Assist® uses a camera and radar to monitor the space in front of the vehicle and create a comfortable driving experience. Travel Assist® works with Lane Assist® to keep the T-Roc R centred within its lane and Adaptive Cruise Control (ACC)® to keep the vehicle a safe distance from the one in front. It's never more useful than on long, tiring journeys or in stop-start traffic requiring frequent braking.

Anyone who takes a drive in the T-Roc R will see it wears its digital innovation proudly. Centrally placed on the dashboard is an impressive 9.2-inch tablet-style Discover Pro navigation system with touchscreen and proximity sensors. The system brings maps and infotainment options to life with brilliant clarity and colour.

Complementing the navigation system is the Digital Cockpit Pro with its 10.25-inch high definition display. It puts essential driving information where it is most useful – right behind the steering wheel – and offers a range of options for configuring navigation and other useful displays.

Optional Packages

The T-Roc R revels in its sleek and sporty appearance, but a Black Style Package takes T-Roc styling to the next level. The package adds black roof paint finish, black roof rails and roofline decorative trims, and black exterior mirror housings for a cool and moody look. The dark theme is continued inside with black surrounds added to the interior air vents and audio system.

Audiophiles will be in awe of the T-Roc R's optional 300W beats premium audio system, which features six speakers, a digital 8-channel amplifier and a subwoofer for extra-deep bass. The system is controlled via the T-Roc R's infotainment system, which greets driver and passengers with a beatsaudio screen when they enter the car.

Also optional is a Panoramic Electric Glass Sunroof, which incorporates a glass panel over the entire width of the roof. When open it allows fresh air to ventilate the cabin. When closed the tinted glass allows muted sunlight to permeate the car, adding warmth and light. Even when not in use, the panoramic sunroof is a stunning feature itself.

Available when Lapis Blue Premium Metallic paint finish is selected, is optional 'Lapis Blue' matte inlays for the dashboard and doors, for when you really want to set your T-Roc R apart. (Not available with the optional Black Style Package).

T-Roc R with optional Lapis Blue matte decorative inlays shown

Colours and Upholstery

The T-Roc R is available in a range of alluring paint colours, including Pure White, Deep Black Pearl Effect and numerous metallic paint colours – Lapis Blue Premium, Kings Red Premium, Pyrite Silver and Indium Grey. A distinctive black roof and door mirrors are an optional extra when the Black Style Package is chosen.

Befitting the T-Roc R's racing aesthetic are Sport front seats clad in Nappa leather appointed upholstery[^]. Black headlining completes the cabin's sporty feel.

Items such as sports equipment and tablets are shown for illustration purposes only and are not available for purchase from Volkswagen Group Australia or its Dealers. For a full range of Volkswagen Genuine Accessories, please refer to the accessories tab at www.volkswagen.com.au or visit an authorised Volkswagen Dealer.

Just like our R performance range, our premium R collection will also captivate with sleek styling, classic blue design notes and the iconic R badge. Get inspired by our exclusive R products and let your sporting spirit shine.

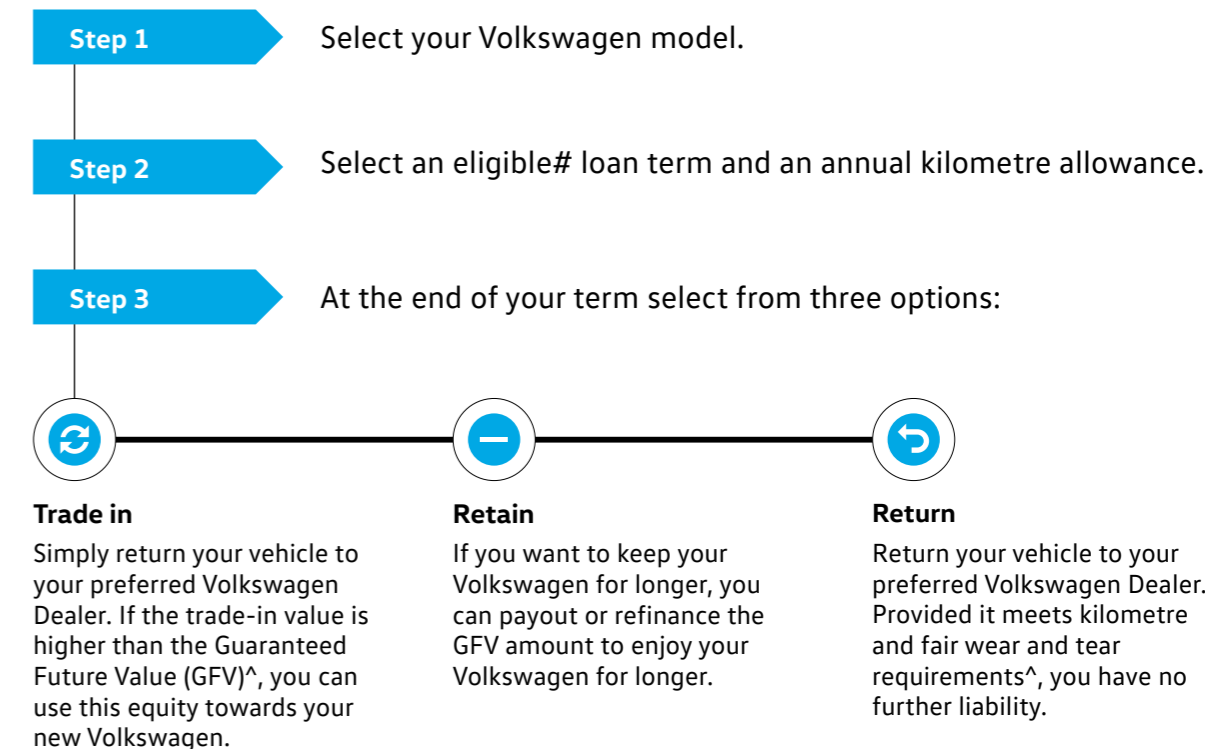

Volkswagen Choice[^]

Guarantee the minimum future value of your Volkswagen

Naturally we understand that your Volkswagen represents a valuable investment, so we understand that you want to maintain it in premium condition. Volkswagen Choice[^] is a finance program tailored to the requirements of Volkswagen owners by providing assurance around your Volkswagen's future value[^], whilst offering simple monthly instalment financing options.

Whether you are selecting your new Volkswagen for business or personal use, you can choose the contract term that best suits your requirements. Enjoy the confidence that comes from having locked in a minimum value up front to be attributed to your vehicle at the end of your contract[^]. There are also no account keeping fees with a fixed interest rate.

5 years Unlimited Kilometre Warranty

At Volkswagen, we pride ourselves on the highest quality standards that come with German engineering.

We back this commitment with a 5 year unlimited kilometre warranty on all new Volkswagen vehicles¹.

1 year Roadside Assist

Every new Volkswagen comes with a 1 year Roadside Assist membership².

That's 24 hour roadside assistance, emergency accommodation, car rental and towing as well as property and other assistance, all included for added peace of mind.

Volkswagen Care Plans

Volkswagen Care Plans³ have you covered for your first 3 or 5 scheduled services, providing you savings off the total Assured Service Pricing RRP. It's convenient, hassle-free scheduled servicing easily available for purchase at your local Volkswagen Dealer.

Assured Service Pricing

Assured Service Pricing⁴ gives you the transparency of knowing how much your service will cost up front.

Our Volkswagen Dealers have access to the latest diagnostic equipment and tools. Plus, they use Volkswagen Genuine Parts[®] to ensure your Volkswagen stays a Volkswagen.

You're in safe hands at your Volkswagen Dealer when it comes to servicing.

¹ Conditions and exclusions apply, see <https://www.volkswagen.com.au/en/owners-service/warranty.html>. Your rights under this warranty are provided in addition to, and in some cases overlap with, consumer guarantees under the Australian Consumer Law and do not limit or replace them.

² Volkswagen Roadside Assist membership is provided by AWP Australia Pty Ltd ABN 52 097 227 177 trading as Allianz Global Assistance. Whenever you request roadside vehicle assistance under your membership, you will be making that request to Allianz Global Assistance, who will provide the services under an arrangement with Volkswagen Group Australia Pty Limited ABN 14 093 117 876. The terms and conditions contain exclusions and limitations, please visit <https://www.volkswagen.com.au/en/owners-service/roadside-assist.html>.

³ Volkswagen Care Plans are available for purchase at <https://www.volkswagen.com.au/en/owners-service/care-plans.html> or from participating authorised Volkswagen Dealers for Eligible Vehicles and covers standard items as contained in each scheduled service interval only. The service intervals occur every 15,000 KM/12 months (whichever occurs first) for all models except MY18 to current Crafter vehicles and MY21 onwards Amarok vehicles, which are scheduled to occur every 20,000 km/12 months (whichever occurs first). These Care Plans can only be purchased prior to the first scheduled service and up to 22,500 km/15 months (whichever occurs first) for all models except MY18 to current Crafter vehicles and MY21 onwards Amarok vehicles which is 30,000 km/15 months (whichever occurs first). The timeframe takes effect from when the vehicle is first reported in our system as 'sold'. Discount structure varies by model. For details of what is not included in a scheduled service, please refer to the program terms and conditions.

⁴ Assured Service Pricing applies to the first 5 standard scheduled services of your vehicle which are scheduled to occur at every 15,000 km/12 month interval (whichever occurs first) or for MY18 to current Crafter vehicles and MY21 onwards Amarok vehicles only, 20,000kms/ 12 month interval (whoever occurs first). Volkswagen will publish the maximum price for a specified Scheduled Service on 1st February each year (or first business day after this date), and pricing will remain fixed for 12 months only. For more details on the Eligible Model's, pricing, items not included and for full terms and condition, please see <https://www.volkswagen.com.au/app/locals/service-pricing-guide>.

[^]Volkswagen Guaranteed Future Value consists of an option to return your vehicle to Volkswagen Financial Services (VFS) ABN 20 097 071 460, Australian Credit Licence 389344, at the end of the term and requires VFS to purchase the vehicle at an agreed price determined by VFS, known as the Guaranteed Future Value (GFV). #Eligible loan terms include 12-60 months, vary by model and are subject to change, ask dealer for more information. At the end of the term, you can elect to: (1) trade-in; (2) return; or (3) retain the vehicle by paying the GFV, which is a lump sum owed to VFS at the end of the loan term after all repayments have been made. You will be liable for any loan contract deficit and additional charges if you exceed the nominated kilometre allowance and/or the vehicle is not in an acceptable condition. Available on new and demonstrator Volkswagen vehicles for selected models. Contact your Official Volkswagen Dealer to verify eligible vehicles for this program. Fleet, government, rental buyers, hire car and chauffeur companies excluded.

~ Emission level according to European Regulation (EC) No. 715/2007 and Regulation (EC) No. 692/2008.

*The Start/Stop system is designed to reduce fuel consumption and CO₂ emissions. It achieves this by automatically switching off the engine while the vehicle is stationary and then starting it again automatically when the driver wants to drive off. There are certain operating conditions where the Start/Stop system is deactivated (e.g. during engine warm-up), please refer to the owner's manual for full operating information.

** Fuel consumption figures according to ADR 81/02 derived from laboratory testing. Factors including but not limited to driving style, road and traffic conditions, environmental influences, vehicle condition and accessories fitted, will in practice in the real world lead to figures which generally differ from those advertised. Advertised figures are meant for comparison amongst vehicles only.

T-Roc R model shown

Glossary

4MOTION

An all-wheel drive system that provides the best possible traction at all road speeds, in all weather and road conditions. An electronically controlled multi-plate clutch directs torque to the axle with the best traction.

When operating under a relatively low load or when coasting, power is primarily distributed to the front axle, thus saving fuel. However, the rear axle can be variably engaged in fractions of a second whenever necessary, even before any wheel starts to slip and therefore reducing the potential for a loss of traction. The wheels of the T-Roc are prevented from spinning even when driving off and accelerating.

Activation of the multi-plate clutch is based primarily on the engine torque demanded by the driver. In parallel, a system within the all-wheel drive control unit evaluates such parameters as wheel speeds and steering angle.

Adaptive Cruise Control (ACC)

Adaptive Cruise Control (ACC) is an extension of the conventional cruise control system with advanced capabilities based on a radar sensor. When ACC is activated, the vehicle automatically brakes and accelerates to a speed and distance set by the driver.

If the T-Roc approaches a slower vehicle, the ACC brakes the car to the same speed and maintains the pre-selected distance. Even when a vehicle pulls into the same lane in front of you or slows, your vehicle is automatically decelerated to the pre-selected distance. If the vehicle ahead moves out of your lane, the T-Roc then accelerates up to the pre-set desired speed.

Deceleration of the vehicle may take place via intervention in the engine management system. If deceleration via engine torque is not sufficient, brake intervention takes place, braking the vehicle to a standstill if the traffic situation necessitates in vehicles equipped with an automatic transmission. ACC can be reactivated automatically by depressing the accelerator pedal.

The dynamics of the ACC system can be individually varied by selecting one of the driving programs from the driving profile selection.

Adaptive Cruise Control (ACC) cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles. The ACC system should not be used on winding roads or in adverse weather conditions such as heavy rain.

Anti-lock Braking System (ABS)

When braking, wheel speed sensors measure the road wheel speed and should one or more wheels start to lock the ABS system reduces brake pressure to that wheel. This prevents the wheels from locking during heavy or emergency braking, enabling the vehicle to remain steerable.

Anti-Slip Regulation (ASR)

ASR is a traction control system that prevents the wheels from spinning under acceleration by reducing engine torque.

Auto Hold function

As soon as the vehicle comes to a complete stop, the ABS hydraulic unit stores the vehicle's final braking pressure. So even when you take your foot off the brake pedal, all four wheels' brakes remain applied, providing increased comfort in stationary traffic. This function is released automatically when you drive off again.

Brake Assist

During emergency braking, Brake Assist aids the driver by increasing the brake pressure automatically to a level exceeding the locking limit. The ABS is thus quickly brought into the operating range, which enables maximum vehicle deceleration to be achieved.

Driving Profile Selection with 4MOTION Active Control

Driving profile selection provides the driver with a wide-ranging choice of settings that can be made to the vehicle according to the driver's preferences. The driver has the option of choosing between the following driving profiles: Normal, Race, Eco, Comfort and Individual. The Normal profile offers a comfortable but dynamic driving style. Race provides faster response of the accelerator pedal, firmer, sportier damping and steering, while the DSG transmission switches to Sport mode. Eco mode has been designed to enhance fuel efficiency by adapting engine performance, earlier gearshift points and consumption-optimised control of the air conditioning system. Comfort mode offers a more relaxed and comfortable driving experience, primarily through the softer suspension setting of the adaptive chassis control. The Individual setting allows the driver to separately set various parameters including steering, engine, Adaptive Cruise Control (ACC) and air conditioning.

4MOTION Active Control provides for the convenient selection of on-road and off-road driving profiles by means of a rotary dial. Rotating the dial selects one of four special all-wheel drive modes: Snow, On-road, Off-road (automatic configuration of the off-road parameters) and Off-road individual (variable settings).

Electronic Brake-pressure Distribution (EBD)

Electronic, more sophisticated means of regulating the ratio of front/rear brake pressure. Settings are varied according to driving and load conditions to ensure each wheel is braked to the optimum extent.

Electronic Differential Lock (EDL)

EDL improves driving and steering characteristics when accelerating on road surfaces where each wheel has a different degree of traction. The system operates automatically and is combined with the ABS system. Using the ABS wheel sensors, EDL monitors the speed of the individual driving wheels. When a difference in driving wheel speed is detected (i.e. when one wheel starts to spin due to differences in road surfaces, e.g. due to water or dirt) the system brakes the spinning wheel, transferring engine power to the wheel with the best traction.

Electronic Stabilisation Program (ESP)

ABS and ASR traction control systems are integrated into the Electronic Stabilisation Program (ESP). In short, ESP helps ensure that the vehicle goes where you steer it even in extreme driving conditions. The ESP system constantly compares the actual movement of the vehicle with pre-determined values and should a situation arise where the vehicle starts to skid, ESP will apply the brakes to individual wheels and automatically adjust the engine's power output to correct the problem. ESP prevents the vehicle from losing control when trying to avoid an accident, for example. It also reduces the effects of understeer or oversteer.

Glossary

Emergency Assist

Emergency Assist monitors the driving characteristics and recognises, within the limits of the system, if the driver suddenly becomes incapable of driving (due to the vehicle not being controlled).

Emergency Assist detects a lack of activity on the part of the driver and issues repeated visual and acoustic warnings and initiates a quick jolt of the brakes and tensioning of the driver's seatbelt to request the driver to take control of the vehicle.

If the driver remains inactive, the system automatically controls acceleration, braking and steering to slow the vehicle down and keep it in the lane. If there is sufficient stopping distance, the system decelerates the vehicle to a complete stop and switches on the electronic parking brake automatically, parking position is engaged, the doors are unlocked and the interior lighting switched on.

When Emergency Assist is actively controlling the vehicle, the hazard warning lights are switched on and the vehicle horn may sound to warn other road users. Ideally this will prevent a collision, or at least reduce its severity.

Emergency Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles. Emergency Assist utilises both the Adaptive Cruise Control (ACC) and Lane Assist driver assistance systems. The ACC system should not be used on winding roads or in adverse weather conditions such as heavy rain. The system will not work if there are no recognisable lane markings. The camera vision can be reduced by rain, snow, heavy spray or oncoming lights. This and vehicles in front of you can lead to the lane markings not being recognised by the Lane Assist system.

Extended Electronic Differential Lock (XDL)

XDL is an extension of the Electronic Differential Lock (EDL) function. When cornering, XDL responds to the load relief at the front wheel on the inside of a corner. The ESP hydraulics are used for the XDL to apply pressure to the wheel on the inside of the corner in order to prevent wheel spin. This improves traction and reduces the tendency to understeer. As a direct result of the one-sided and precise braking pressure, cornering is sportier and more accurate.

Fatigue Detection

The driver Fatigue Detection system automatically analyses the driving characteristics and if they indicate possible fatigue, recommends that the driver takes a break. The system continually evaluates steering wheel movements along with other signals in the vehicle on motorways and others roads at speeds in excess of 60 km/h, and calculates a fatigue estimate. If fatigue is detected, the driver is warned by information in the Multi-function Display and an acoustic signal. The warning may be repeated once if the driver has not taken a break.

Fatigue Detection cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and therefore determining whether or not they are fit to drive. The driving behaviour can be evaluated only when the speed is above approximately 60km/h. The functionality of the system is restricted given a sporty driving style, winding roads and poor road surfaces.

Front Assist with Pedestrian Monitoring function

The Front Assist ambient traffic monitoring system uses a radar sensor and multi-function camera to detect critical distance situations and thus help to shorten the braking distance, reducing the risk of a rear-end collision.

If a vehicle is detected ahead of you in the lane, the distance and the speed relative to it are calculated. If the gap is closing too fast, Front Assist initially warns the driver by means of an audible as well as a visual signal. At the same time, the brake pads are brought into contact with the brake discs and the sensitivity of the Brake Assist is increased. This primes the braking system for a possible emergency stop. Furthermore, an automatic jolt of the brakes warns the driver of the danger. If the driver also fails to react to the warning jolt, Front Assist brakes automatically, helping to avoid a collision or reduce the severity of the accident.

At vehicle speeds below 30km/h, the system monitors the area ahead of the car for vehicles which might present a threat of collision. If a collision is likely, the brakes are first pre-charged and makes the Brake Assist system is made more sensitive: if the driver should notice the risk, the car is ready to respond more quickly to

their braking action. However, if the driver still takes no action and a collision becomes imminent, emergency braking is independently applied. If the driver intervenes to try to avoid the accident, either by accelerating hard or by steering, the system will deactivate and allow the driver to complete the avoidance manoeuvre.

Pedestrian Monitoring is an extension of the Front Assist monitoring system. The system uses a radar sensor in the radiator grille and windscreen mounted multi-function camera to monitor the area in front of the vehicle and within the limits of the system, register certain situations, for example a pedestrian stepping onto the road suddenly. The system then gives an immediate acoustic and visual signal to warn the driver. If the driver does not brake, the system initiates a jolt of the brake as a warning about the critical situation, while at the same time preparing for hard braking. If the driver fails to react, the system automatically performs emergency braking, within system limits. Ideally this will prevent a collision, or at least reduce its severity.

Front Assist with Pedestrian Monitoring cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles.

Lane Assist

Lane Assist is a lane departure warning system that is designed to help reduce the likelihood of the vehicle leaving the road or crossing into an oncoming lane and therefore the risk of accident as a result of driver distraction or a lapse in concentration.

The Lane Assist system monitors the road ahead with the aid of a camera (located near the interior rear-view mirror) which recognises lane markings and evaluates the position of the vehicle at speeds above 60km/h. If the vehicle starts to leave the lane, the Lane Assist system takes corrective steering action. If this is not sufficient the driver is warned about the situation by a steering vibration. Additionally, if no active steering movements by the driver are recognised, a message will appear in the Digital Cockpit in conjunction with a warning tone. The corrective steering function can be overridden by the driver at any time and the system does not react if the turn indicator is set before crossing a lane marking.

Lane Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and therefore staying in the lane at all times. The system will not work if there are no recognisable lane markings. The camera vision can be reduced by rain, snow, heavy spray or oncoming lights. This and vehicles in front of you can lead to the lane markings not being recognised by the Lane Assist system.

Manoeuvre braking

Manoeuvre braking assists the driver to avoid or reduce damage in a potential collision by initiating emergency braking. It supports the driver during forward and reverse manoeuvring in a speed range of a maximum 10 km/h. If the risk for an accident is recognised, emergency braking is initiated to minimise possible damage.

Manoeuvre braking cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle. The object must be detected by the sensors. If the driver notices a risk that pedestrians, other vehicles or objects could be damaged they need to react accordingly and stop the vehicle.

Multi-collision brake

The multi-collision brake has been designed to provide effective assistance for the driver in the moments after an accident. Multi-collision brake triggers automatic controlled braking once an initial collision has been detected so as to reduce the intensity of further accidents after a collision and can help prevent follow-on collisions with oncoming traffic.

The triggering of the multi-collision brake is based on a collision being detected by the airbag sensors. The ESP control unit limits the deceleration of the vehicle by the multi-collision brake to a defined value and vehicle speed. The vehicle can still be controlled by the driver, even when automatic braking is taking place. The driver can interrupt the multi-collision braking at any time by accelerating or braking even more strongly.

Glossary

Park Assist

The third generation Park Assist system actively helps the driver when entering or reversing into 90° parking bays, as well as reversing into and driving out of parallel parking spaces. The system works by using sensors mounted either side of the front and rear bumpers together with parking distance sensors front and rear. To park, the driver simply presses the Park Assist button to select the type of parking manoeuvre and uses the appropriate indicator as the car slowly passes the potential parking space. Sensors scan the size of the parking space as the car is driven past and the driver is alerted if the parking space is big enough. If there is sufficient space, the driver stops the car, selects the correct gear and lets go of the steering wheel.

Park Assist will alert the driver of the intended path and subsequently the appearance of obstacles in the Multi-Function Display, within the driver's field of vision. Park Assist then actively supports the driver by taking over the steering control and parks the vehicle in the available space using the ideal course, if necessary with several moves. The driver can however take over the control of the steering at any time and end the automatic parking procedure.

Park Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle. If the driver notices a risk that pedestrians, other vehicles or objects could be damaged or if they are uncertain of the risk, they will need to react accordingly and stop the vehicle, ending the function.

Proactive occupant protection system

The proactive occupant protection system incorporates active and passive safety elements. When the system detects a potential accident situation at speeds above approximately 30km/h, the occupants and the vehicle are prepared for a possible accident. Automatic reversible tensioning of the seat belts secures the driver and front passenger in their seats to attain the best possible protective potential of the airbag and belt system. The hazard warning lights are activated. In case of high transverse dynamics the side windows (and optional panoramic sunroof) are also closed, leaving just a small air gap. Closing of the windows offers optimal support to the head and side airbags which results in the best possible protection.

The latest generation of the Proactive Occupant Protection System can also detect risks at the rear utilising the signals from the rear radar sensors for the Side Assist system. If the system recognises an immediate risk, the vehicle and occupants are prepared for a possible rear end collision by warning an approaching vehicle with fast hazard warning light frequency, closing the side windows (and optional panoramic sunroof), as well as tighten the front seat belts.

Side Assist with Rear Traffic Alert

Side Assist with Rear Traffic Alert system supports the driver in assessing and avoiding dangerous situations, especially in critical situations, e.g. city and heavy traffic. Side Assist detects cars and motorcycles next to and up to 70m to the right and left behind your own vehicle and highlights these vehicles via a LED indicator in the door mirror at speeds above 15km/h. If you indicate to change lanes, the system calculates whether one of them could be dangerous due to position and speed and if deemed necessary will draw attention to this by flashing noticeably. In this instance, Lane Assist can also apply corrective steering to help avoid a collision.

Rear Traffic Alert monitors the traffic crossing behind the vehicle when reversing out of a parking space or manoeuvring. Utilising the Side Assist radar sensors in the rear bumper the system warns the driver of approaching traffic via an audible warning followed by a visual message in the Optical Parking System (OPS) and can also provide braking intervention if necessary to help avoid a collision.

Side Assist with Rear Traffic Alert cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles.

Travel Assist

Travel Assist is an assistance system for partly automated driving. At the push of a button, Travel Assist can support the driver in monotonous and tiring driving situations commonly encountered on long motorway journeys. This system combines the functions of Adaptive Cruise Control (ACC) and Lane Assist with adaptive lane guidance to accelerate, brake and maintain the vehicles position within its lane. The capacitive steering wheel can detect whether the driver's hands are on the steering wheel in readiness to steer the vehicle and will issue a visual and audible warning when not detected.

Travel Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles. Travel Assist has been developed for use only on motorways. The ACC system should not be used on winding roads or in adverse weather conditions such as heavy rain. The system will not work if there are no recognisable lane markings. The camera vision can be reduced by rain, snow, heavy spray or oncoming lights. This and vehicles in front of you can lead to the lane markings not being recognised by the Lane Assist system.
